

# Adhesives for 3D Printed Parts

- This is a PDF document created by the Loctite Company describing their various adhesives and which ones provide the best results under various conditions:
    - <https://dm.henkel-dam.com/is/content/henkel/loctite-3d-printing-bonding-guide-english>
    - I learned a bunch about adhesive use: gap requirements for certain glues/epoxies to get desired results, usable temperature ranges, and which types of glues or epoxies are most likely to work with various 3D printed plastics.
    - Even though this is a Loctite branded document, all adhesive manufacturers have equivalents with likely similar properties and requirements. A great resource in my opinion.
-
