

Solvents for cleaning Resin Prints

Something to rinse away the remaining uncured resin so the printed model can be fully cured without additional blemishes.

Isopropyl Alcohol, Isopropanol, Rubbing Alcohol

- This is the most commonly and easily available alcohol in the US, every drug store and market carries this alcohol
- Works adequately to clean normal resins
 - Elegoo Standard resins
 - Elegoo ABS-Like resins
- Works poorly to clean some other resins
 - Siraya Tech Blu - Nylon Black
- Many people complain about the smell being more objectionable compared to Ethyl Alcohol

Ethyl Alcohol, Ethanol, Liquid Courage

- Available in the US at most Home Improvement, Paint Supply, or Hardware stores (Liquor stores are too expensive!)
- Alcohol found in Drinking Liquor, but often "denatured" by adding poisonous Methanol to prevent human consumption

- Works great to clean all resins I have tried!
- Cleans better than Isopropyl but Ethyl can degrade or destroy the plastic on some washing stations
- Using anhydrous alcohol didn't seem to make any difference in my testing, 120-200 proof seemed similar enough

Water, Agua, Rain

- The most available solvent on the planet, and safe enough to drink!
- My experience with water soluble resins is limited
- Resin containing water can NOT be dumped anywhere
 - Can be taken to Hazmat disposal facility
 - Can be left in the sun to dry and cure if the quantity isn't too large

Methyl Alcohol, Methanol, Wood Spirits

- This is a new idea to me, we will see if it bears fruit when I am able to test it

Acetone, Fingernail Polish Remover

- This is a new idea to me, we will see if it bears fruit when I am able to test it

Other solvents such as Xylene, Mineral Spirits, Paint Thinner, etc.

- This is a new idea to me, we will see if it bears fruit when I am able to test it
